Epson EB-475Wi and pens create an interactive environment

In the past, a projector and an interactive whiteboard were needed to create an interactive environment in a classroom. Now, with the ultra short throw EB-475Wi almost any wall can be made interactive.

The new high performance projector and interactive pen combination integrate interactive functionality in one machine. With no requirement for an interactive whiteboard, an existing pen-based whiteboard or even a flat wall can be used for colour presentations, interactive brainstorming sessions and on the fly annotation.

With the EB-475Wi and the easy to use (Easy Interactive Tools 2) software (via download from www.epson.com.au) the whiteboard can be turned into a fully interactive teaching tool; at the end of class, simply save the file for printing or emailing to students.

Each projector comes with two interactive pens which can be used simultaneously to afford new opportunities for learning, with teacher and students writing or interacting together.

Capable of producing an interactive image size anywhere from 152 cm up to 260 cm diagonal (native WXGA) on nearly any wall, the Epson EB-475Wi delivers an amazing interactive work environment. Thanks to this ultra short throw distance, presenters can deliver rich multimedia content without the distraction of glare in the eyes, or shadows on the board disrupting vision.

With the added benefit of 3LCD technology, presentations feature rich, vibrant colours that bring content to life. Plus, with 2600 lumens light and colour light output, there is no need to dim the lights or draw the curtains.

The EB-475Wi comes complete with an integrated wall mount, designed for stylish appearance and fast, simple installation. Adjustment dials are colour coded to match image correction images projected by the projector and selectable from the on screen display. Simply find the image that best represents the current shape of the projected image and adjust the corresponding coloured dial. The image will be square and the projector operational within moments.

For tricky installations where an uneven projection surface impedes progress, simply utilise the Quick Corner function to fine-tune the image for perfectly square corners and edges.

The EB-475Wi can also project vertically downward, enabling users to change a table top into a workspace perfect for collaboration. By utilising the optional ELP-MB29 table mount, an ordinary table becomes a centre for creative collaboration.

With the EB-475Wi there is no need to install any additional driver software and this opens new opportunities for users in institutions where computers are locked to stop the installation of software. In fact, there is no need to calibrate because the projector performs an auto calibration, delivering high accuracy, fast response and reliable performance.
